Orz Hello, everyone. This is the notes for Advanced Data Structures course in ZJU.

The notes are mainly based on the lecture slides provided by Prof. Xiaokui Xiao, and supplemented with my own understanding and additional materials from various sources.

The notes are organized according to the course syllabus, covering topics such as balanced trees, heaps, hash tables, graph algorithms, and more.

I hope these notes will be helpful for your studies and provide a solid foundation in advanced data structures. If you have any questions or suggestions, feel free to reach out to me.

Happy learning!
